Thorough Sterilization Begins Before You Lift the Lid

Thorough pre-sterilization technique helps make hard-to-get instruments last longer.

Immediately after use instruments should be brushed individually in soap and water to remove blood and tissue residue. Crevices should be well cleaned.

Immerse in boiling water at once . . . do not accumulate them in a raised tray so that steam and air can cause corrosion. Similarly after the exact period of boiling, remove and dry at once.

Write for Castle Book on "Sterilizing Technique".

Use Castle Sterilizer Tablets for brighter Intruments and a cleaner sterilizer.
